Ronald Schultz:

Larson, L.J. and Schultz, R.D. A Comparison of Selected Canine Vaccines for Their Ability to Induce Protective Immunity Against CPV-2. Am. J. Vet. Res. 58(4):360-363, 1997

Dr. Ronald D. Schultz, Ph.D.- "Annual revaccination provides no benefit and may increase the risk for adverse reactions. The percentage of vaccinated animals (those vaccinated only as puppies) protected from clinical disease after challenge with canine distemper virus, canine parvovirus and canine adenovirus in the study was greater than 95%." Current and Future Canine and Feline Vaccination Programs. Dr. Ronald Schultz is a Professor and Chair of the Department of Pathobiological Sciences at the School of Veterinary Medicine, UW-Madison. Schultz, R.D. - Current & Future Canine & Feline Vaccination Programs. Vet Med 3: No. 3, 233-254, 1998 [more](#). A chart provided in the report shows immunity levels for all vaccines currently given to dogs lasting a minimum of 5 years with most lasting 7-15 years!
